

SCYBOT TECHNOLOGIES LLC

PRIVACY POLICY FOR FLASHTOPASS

Last updated: 29 August 2026

FlashToPass is a math-practice app made by Scybot Technologies LLC (“we,” “us,” “our”). Because FlashToPass is designed to be used by children as well as adults, we built it to collect as little information as possible. This policy explains, in plain language, what FlashToPass does and does not do with information. It is written to comply with the U.S. Children’s Online Privacy Protection Act (COPPA).

This policy describes how the app works today. We may add features later that involve information (see Section 7) — if we do, we will update this policy first.

THE SHORT VERSION (how FlashToPass works today)

- FlashToPass does not collect, store, or transmit any personal information to us — ever.
- All practice data — the math problems you work on, your progress, and any learner profiles you create — is stored on your device. None of it is ever sent to Scybot Technologies LLC or to anyone else.
- If iCloud sync is enabled in a version of the app you are using, your practice data syncs only through **your own** iCloud account, using Apple’s CloudKit “private database.” It is readable only by you; we cannot see it (see Section 3).
- Some optional features ask to use your device’s **camera** (to scan a printed practice sheet), **microphone** (for voice practice), or **local network** (for in-room competitions). They run entirely on your device; nothing they capture is saved by the app or sent to us (see Section 4).
- Learner profiles never ask for a name — not even a nickname. Each profile is identified by an avatar color and a fun badge the app generates automatically, so your family can tell profiles apart without the app storing anything about who a profile belongs to.
- We use no accounts, no advertising, no third-party analytics, no tracking technologies, and no cookies.
- We do not know who you are, and we cannot contact you unless you contact us first.
- Purchases are handled entirely by Apple. We never receive your name, email address, or payment details.

1. INFORMATION WE COLLECT

We do not collect any personal information through FlashToPass.

The app has no sign-up and no login, and it contains no fields that ask for a name, email address, phone number, birthday, photo, location, or any other personal detail. We do not collect device identifiers, advertising identifiers, or usage analytics, and we do not track you across apps or websites.

The optional learner profiles let several family members keep their practice separate, and they ask for **nothing at all** — no name, no nickname. Each profile gets an **avatar color** and a fun **badge** (like a fox or

a turtle) that the app generates automatically; the badge is computed fresh every time from the profile's internal random identifier and is never stored anywhere. There is no way to enter or edit a name anywhere in the app. Profiles are stored as described in Sections 2 and 3; they are never sent to us.

2. INFORMATION STORED ON YOUR DEVICE

So that the app can remember where you left off, FlashToPass saves your math-practice data on your device. This includes:

- which math problems each learner profile has practiced, and how each attempt went (right, wrong, skipped, or too slow) — this is what powers the guided-learning feature;
- the days on which practice sessions were completed (for the in-app activity calendar); and
- each profile's avatar color and internal random identifier.

This information:

- is stored only on your device (and, if iCloud sync is enabled, in your own iCloud — see Section 3);
- is never sent to Scybot Technologies LLC or to any third party;
- is not linked to your identity, because we do not collect any identifying information;
- can be **exported** at any time as a plain, human-readable file, per learner profile (a parent-gated action in the app), so you always have a portable copy; and
- can be **permanently erased** at any time — tap “Reset Progress” on the app's Account screen to erase this app's saved practice progress (the learner profiles themselves stay, so any other Scybot education app keeps its own data), delete an individual profile (a parent-gated action, which removes that profile and everything it ever practiced, in every Scybot education app), or delete FlashToPass from your device.

3. iCloud SYNC (WHEN AVAILABLE AND ENABLED)

Where a version of FlashToPass offers iCloud sync, it uses Apple's **CloudKit private database** to keep your practice data the same across your own devices (for example, an iPhone and an iPad signed into the same Apple Account). Plainly:

- What syncs is exactly the practice data described in Section 2 — profiles, per-problem progress, and the activity calendar. Nothing else.
- It is stored in **your personal iCloud account**, in a private area that only your Apple Account can access. Apple acts as the storage provider (processor); Apple's own privacy policy and iCloud terms apply to that storage.
- FlashToPass uses a storage area shared by **Scybot education apps**, so if we release other education apps that support it, learner profiles (and, where an app supports the same subject, progress) can appear in those apps too — still only under your own iCloud sign-in, still inaccessible to us. We will update each app's policy before any such app ships.
- **Scybot Technologies LLC has no access to it.** We cannot read, receive, or share your synced data — the private database is technically inaccessible to us. iCloud sync does not send us anything.

- Sync happens only under your own iCloud sign-in and your device's iCloud settings. Turning iCloud off for FlashToPass in your device Settings stops syncing; data already on a device stays on that device until you erase it.
- Deleting a profile or using “Reset Progress” erases the data from the synced store, which propagates the deletion to your other devices. Data retained by Apple after deletion (such as backups) is governed by Apple's policies.

Because synced data lives only in your own iCloud and is inaccessible to us, we still collect nothing — and there is still no personal information for us to hold, sell, or share.

4. FEATURES THAT USE YOUR CAMERA, MICROPHONE, OR LOCAL NETWORK

Some optional features ask your device for permission to use the camera, the microphone, or the local network. In every case, the app does not save what these features capture or send it to Scybot Technologies LLC or anyone else. Your device asks for each permission the first time you use the feature, and you can decline it, or change it later in your device Settings.

- **Camera — scanning printed practice sheets.** If you print a practice sheet and use the in-app scanner to grade it, FlashToPass uses the camera to read the page. The app uses the image only to recognize and grade the answers; it does not save the image to your photo library or send it to Scybot Technologies LLC or anyone else. The text recognition is performed on your device by Apple's software.
- **Microphone — voice practice.** If you turn on voice practice, FlashToPass listens for your spoken answers using Apple's on-device speech recognition. The app uses the audio only to check the current answer; it does not record it, keep it, or send it to Scybot Technologies LLC or anyone else. Speech is recognized on your device by Apple's software, whose handling of it is governed by Apple's privacy policy.
- **Local network — in-room math competitions.** If you host or join a nearby math competition, FlashToPass uses the local network (and Apple's Bonjour service discovery) to connect directly to other devices in the same room. The devices exchange only what the game needs — the math problems and each player's score and progress, identified by a temporary in-game player number assigned for that competition. No names, learner profiles, or other personal information are shared; nothing is sent to Scybot Technologies LLC, and nothing goes over the internet.

This section describes on-device sensor use and direct device-to-device play. It does not change Section 1: because the app sends none of this to us — it stays on your device, or for competitions travels only over the local network between nearby devices — we still collect nothing.

5. PURCHASES

FlashToPass offers an optional paid subscription and one-time unlock through the Apple App Store. When you choose to make a purchase:

- the purchase is processed by Apple, not by us;
- Apple — not Scybot Technologies LLC — handles the Apple Account and payment information involved; and

- we receive only an anonymous confirmation from Apple that an unlock is active on the device. We do not receive your name, email address, or payment details.

Purchases sit behind a parental gate, so a child cannot start a purchase without an adult. Please see Apple's own privacy policy for how Apple handles purchase information.

6. CHILDREN'S PRIVACY (COPPA)

FlashToPass is suitable for children. Because we collect no personal information from anyone, we do not knowingly collect personal information from children under 13. No verifiable parental consent is required, because there is nothing to consent to — we simply do not gather personal information. The camera, microphone, and local-network features described in Section 4 send us nothing — they process on the device, or for competitions communicate only over the local network between nearby devices — so they do not change this.

Learner profiles never ask for a child's name — profiles are told apart by an avatar color and an automatically generated badge, so there is no name for the app to hold. Creating, deleting, and exporting profiles are all behind the parental gate, so these actions require an adult.

If you believe a child has somehow sent us personal information (for example, by emailing us directly), a parent or guardian may contact us at support@scybot.com and we will delete it promptly.

7. NO ANALYTICS OR ADVERTISING TODAY — AND WHAT MAY CHANGE LATER

As FlashToPass works today, it contains no third-party analytics, advertising, tracking, or crash-reporting software of any kind, and it stores nothing outside your device and (if enabled) your own iCloud. We do not share information with advertisers, data brokers, or analytics providers, because we do not collect any.

We may add features in the future — for example, optional user accounts, or privacy-preserving diagnostics and crash/performance analytics. If we do, then **before any such feature collects or transmits any information to us** we will:

- update this policy to describe exactly what is collected, why, and with whom it is shared;
- update our App Store “App Privacy” disclosures to match; and
- obtain any consent the law requires — including verifiable parental consent for children where COPPA (or other applicable law) requires it.

Until we do that, the descriptions in this policy reflect how the app actually works.

8. YOUR RIGHTS

Because your information never reaches us, you remain in control of it at all times:

- You can review everything FlashToPass stores simply by using the app.
- You can export a portable copy of any learner profile's data from the app (behind the parental gate).
- You can permanently erase this app's saved practice progress by tapping “Reset Progress” on the Account screen; the learner profiles themselves stay, so any other Scybot education app keeps its own data. To erase a profile and everything it ever practiced — in every Scybot education app —

delete that profile. Deleting FlashToPass from your device removes the app's data from that device. If iCloud sync is enabled, erasure propagates to the synced copy.

Because we hold no personal data about you on our own systems, the practical way to review, export, or erase your information is on your own device, as described above. Depending on where you live, you may have additional rights over personal information under local law; since we collect none, there is nothing for us to hand over or delete, but you can always contact us with any question or request.

If you are in the European Economic Area or the United Kingdom: European data-protection law (the GDPR and the UK GDPR) gives you rights over personal data that organizations hold or process about you. Here is what is true of FlashToPass: everything described in Sections 2, 3, and 4 stays on your device or in your own iCloud, and none of it reaches us — we hold no personal data about you and receive none. We have not appointed a representative in the European Union or the United Kingdom under Article 27; there is nothing with us for a representative to be responsible for. If we ever add a feature that sends personal information to us (see Section 7), we will appoint a representative wherever the law requires one and list them here before that feature ships. In the meantime, you can write to us directly using Section 9.

9. CONTACT US

FlashToPass is provided by Scybot Technologies LLC, a limited liability company organized under the laws of the State of Utah, USA. We answer privacy questions ourselves — no third party sits in between. If you have any question or request about this policy or your privacy, including a question from a parent or guardian about a child, you can reach us:

- by email, at support@scybot.com; and
- by post — email us at support@scybot.com and we will give you our current mailing address for written correspondence.

Because we hold no personal information about you, we will not be able to look up any past use of the app when you write. Just tell us what you need and we will help.

10. CHANGES TO THIS POLICY

If we change this policy, we will post the new version here and update the “Last updated” date above. If we ever make a change that would newly involve collecting personal information, we will say so clearly before it takes effect.

11. GOVERNING LAW

This policy is provided by Scybot Technologies LLC, a company organized under the laws of the State of Utah, USA. Nothing in this policy limits any right you may have under the mandatory laws of your own country of residence.
